

Date 01/17/2026

Start Time: 0654

End Time: 0900

Current Progress...

- user input is requested and stored in program
- class and method created to remove whitespaces from user input

Breaks...

- 2
- approximately 10mins total

Date 01/19/2026

Start Time: 1700

End Time: 1914

Current Progress...

- Program completed
- Original plan for solution re-evaluated and adjusted
- Tested to and updated to handle the following scenarios:
 - if all inputs are valid numerical numbers (positive or negative, whole or irrational) and the final input is zero or null : the average is calculated, zero and null move the program to begin calculations and are not counted in the calculations
 - if the only input is zero or null : the user is given the error "cannot divide by zero," told to provide input and the program ends
 - if a non-null and non-numeric value is given (either only or in addition to valid input) : the user is told that their input is not a number and the program ends

Breaks...

- none
